Hardware replacement

- Transition work completed, old hardware turned off and removed
- Current setup in Orestaden
 - 3 Ganeti servers
 - 2 Postgresql servers
- Old hardware moving to HPC2N and into Mordor

dCache

- dCache ansible environments:
 - Production
 - Preproduction
 - Experimental
- dCache now at 6.2. Unclear if we were faster than DESY, but close!
- Next target is reinstallation of headnodes and expanding headnodes to three with one always in stand by.

Sectigo Certificates

- New certificate provider since last spring
- Problems with issuing correct IGTF certificates for both users and hosts.
- Or at all...
- “Special characters” not allowed in DN, but many universities have this.
- Make sure your CA works correctly in good time before your old Digicert certificates expire.

The cat
