

Nordic Collaboration for Social Impact

Tuesday, May 14, 2019 1:45 PM (30 minutes)

The Nordic e-Infrastructure Collaboration (NeIC) offers a framework where national actors can join forces to co-create new services, define common operational frameworks and pool the e-infrastructure competencies. NeIC supports excellent research through partnerships of national actors. However, the impacts of our collaboration reach much farther. My presentation is biased towards social impact, but if you follow closely you may find hints at future directions that we could take together.
