Building

‚Container in HPC Workshop 101'

Christian Kniep, NeIC'22

Goal
What do we want to achieve?

1. Show ‚spack containerise' as one (sane) way of building containers

2. Have a discussion around what problems we need to deal with

Conclusion

What did we learn

1. Building an image is one thing, it is not as different from building locally

2. When we do `module load` natively, what does happen?

3. How do we cope with that in containers
