

Containers

Wednesday, 1 June 2022 08:30 (2h 30m)

Speakers: Christian Kniep (QNIB Solutions)

Containers with the build-once-run-everywhere principle have become very popular for scientific use cases. The majority of HPC platforms for research now support container runtimes. This workshop will introduce several container platforms (Docker, Singularity, Sarus and Podman) and provide hands-on MPI and GPU examples.
