Keynote: How to Hack a Country - *a practical guide*

Tuesday, 27 June 2023 10:10 (45 minutes)

Cyber Warfare is a pretty vague concept. Often it is used *intentionally* vaguely, because it is a good way to get funding. It is a big, scary phrase. *Our Cyber Warriors need umpteen millions to Cyber Defend the nation against Cyber Warfare.*

But what does it mean in practice? How could you hack a country? How would *I* hack a country? We will discuss real-life attacks and vulnerabilities, past, present and future, in order to gain a better understanding of the realities behind the big words.
