

Event report - Research Software Engineering: Bridging Knowledge Gaps

The CodeRefinery project has been invited to participate in the Dagstuhl seminar “Research Software Engineering: Bridging Knowledge Gaps” in mid April 2024 (after submission deadline). This submission aims at summarizing the findings of that event and share information relevant to the Nordic-RSE community.

The main part of the talk will be about the sessions on formal and informal education and training of RSEs in state-of-the-art software engineering research and community building. Also the provision of better access for the software engineering research community to the problems and challenges that research software engineers face in practice will be discussed.
