Compliance-as-Code: how to do regulated business using public cloud

Tuesday 10 June 2025 10:15 (1 hour)

Moving to the public cloud should not feel like navigating a maze of roadblocks - yet for DevOps teams in regulated industries, that is often the reality. Compliance, risk, legal, and information security teams frequently operate in silos, slowing down DevOps teams' ambition to deliver innovation at speed. In this session, we will explore how Compliance-as-Code can unify these efforts, turning governance into a growth enabler rather than an obstacle. I will show why compliance-as-code is essential, how it is an argument for lowering risk and accelerates cloud adoption - empowering your teams to focus on what matters most: delivering business value.

Length

60 minutes

Optional: Speaker / convener biography

Emelie is a Senior Cloud Security Expert with a background in data security engineering and has focused on IT-security and compliance in public cloud services the past 7 years. During her career, she has worked primarily with regulated industries within the finance and insurance sector where she has focused on building security for big data platforms to support machine learning and AI initiatives for the financial sector. Today, Emelie focuses on designing security architecture in the financial sector while supporting organisations with implementing DORA.
