# HIP / Alice-tron

- ▶ Virtual cluster on CSC's Openstack system cPouta
  - ▶ Managed with a set of Python+Ansible scripts, based on a system made by Olli Tourunen many years ago, which he (I think!) based on ElastiCluster (a, by now, very, very old version of ElastiCluster . . . )

# HIP / Alice-tron

- Almalinux 9
- Full node jobs
- Still IPv4 only ...
  - ... because of lack of IPv6 support in underlying cloud platform. To change during this year (maybe?)
