UiO site report

Dmytro Karpenko (UiO/NeIC)

NDGF All Hands #1, April 2019, Ljubljana

Abel computing cluster

- Zombie! (aka unofficial running until the end of 2019)

shutterstock.com • 724004767

Computing

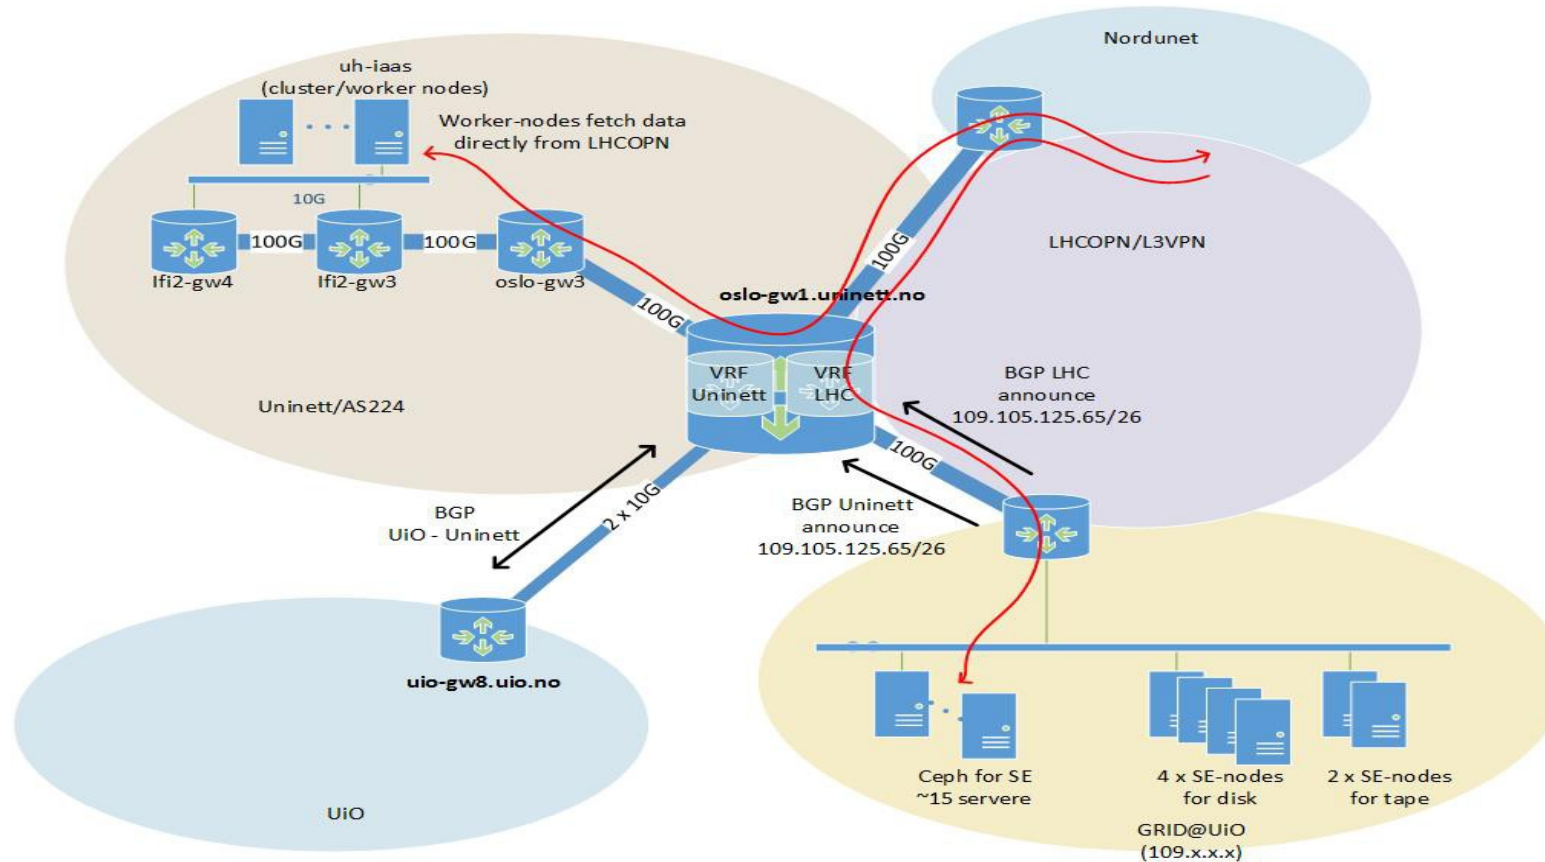

- Everything is moved to OpenStack
 - A new project is being tested by Maiken now
 - We are promised enough nodes to fulfill the pledge (600-800 cores, Epyc Rome)
 - Full pilot mode is the idea
 - Running HammerCloud jobs, there are issues with production jobs (cgroups, etc.)
 - A bit unclear how to tackle data transfers
- IPv6 and CentOS7 solved

UiO storage

- Everything except tape moves to CEPH
 - Vincent is on top of it
 - 1.5 PB
 - The new hosts just got addresses on LHCOPN
 - CEPH will be installed next week
- Old dCache disk servers and the storage will be decommissioned
- The tape is working but is very slow, it is now propagated to the management of all possible sides
 - An e-mail arrived yesterday: the slowness problem has been nailed
 - No capacity upgrades planned

UiO network

- The new setup provides 100G to the entry points
